PowerArchiver incorporates 7-Zip compression and uncompression DLL by Igor Pavlov. 7-Zip is an open source format distributed under the LGPL. More information about 7-Zip format can be found at: <http://www.7-zip.org>.

For compression and decompression of BZIP2 compressed files (.bz, .bz2, .tbz, .tbz2) PowerArchiver makes use of LIBBZ2.DLL. The BZIP2 project is completely free and available to everyone. More information can be found at <http://www.bzip.org/>.

The 2007 Microsoft Office User Interface is subject to protection under U.S. and international property laws and is used by ConeXware, Inc. under license from Microsoft.

**We wish to give thanks to everyone who helped us create PowerArchiver, and send a special thanks to the following people:**

David Cornish — who improved explorer shell extensions, added SFX CAB support, created the original toolbar skin, offered many suggestions, found many bugs, and provided many solutions to

problems.

Juri Skuratovski — who helped us with 7-Zip implementation in PowerArchiver 2004/2006.
