Encryption Suite Pro Helper

Introduction

Encryption Suite PRO Helper is a system tray application that enables use of Encryption Suite PRO features through quick right click options.

How does it work?

Once started, Encryption Suite PRO Helper resides in your system tray and starts every time your computer turns on.

Options when right clicking on PowerArchiver Starter icon:

- "Create New" - when clicked, the Create New Storage wizard will start and you may proceed with creating a new Secure Storage Drive. Single click on the Encryption Suite PRO Helper will bring up the Secure Storage Manager.
- "Bind Existing" - when clicked, you will be asked to locate your previously created storage(.pasf file) and add it to your storage list in the Secure Storage Manager where it can be mounted/enabled.
- "Manage Keys" - when clicked, the OpenPGP key manager will appear where you can edit/add/remove PGP keys for use when encrypting.

The "Drives" section at the top acts as the Secure Storage Manage will show the available drives. You may select them and a submenu will appear where you may select to enable/disable/automount/remove your drive or adjust it in the properties option.

How to enable PowerArchiver Starter

When you first install Encryption Suite PRO, you may enable the Encryption Suite PRO Helper by going to the Configuration menu and then to the General Tab. In that section, you may checkmark the option to start the Helper every time your computer starts and you may click the Run Helper Now button to start the Helper immediately.

How to disable PowerArchiver Starter

If you want to disable the Encryption Suite PRO Helper from starting every time your computer starts, simply uncheck the option in Configuration>General. To close the Encryption Suite Helper, when it is turned on, right click it in system tray and select "Close".

Please Note:

To minimize use of resources, PowerArchiver Starter has been written in assambler-like language for minimum size (179 kB on disk, and 64 kB in installation) and resources usage (only 784 kB of private memory used).
