

# Secure Storage Manager

## Introduction

The Secure Storage manager interface allows you to create a new secure storage as well as manage and work with your created Secure Storages.

## Using Secure Storage Manager

- **Enable** - left click a drive that you wish to mount to select it and click Enable to mount it. The password to the drive being mounted will be asked upon clicking Enable.
- **Disable** - when clicked, will unmount the mounted/selected drive.
- **Open in Explorer** - when clicked, the selected drive will be opened in Encryption Suite Pro's internal explorer that will display your drive and allow you to manage it.
- **Create New** - when clicked, will start the Create New Storage wizard and allow you to create a new Secure Storage.
- **Bind Existing** - when clicked, will allow you to select and add a previously created Secure Storage that has not yet been added to the Secure Storage Manager.
- **Manage Keys** - when clicked, will start the OpenPGP key manager where you may create and edit your OpenPGP keys.

## Please Note:

Secure Storages listed in the Secure Storage Manager can also be right clicked and managed from the right click menu as well. Right click a Secure Storage and select Properties to manage/change settings on currently available Secure Storage drives.
